

# PREMIER RANGE

We all have extremely high expectations of the modern day washroom when it comes to safety, cleanliness and style. That's why we've developed Premier, a high quality range of innovative washroom products.

This range features the unique Polygiene® antibacterial technology. Used on the dispensing levers, Polygiene® starts to kill microbes instantly upon contact and breaks the transmission path of diseases, making these units some of the most hygienic dispensers in the market.

## PREMIER WC/UR SANITISER

This touch free toilet and urinal sanitiser actively attacks hard water and mineral deposits and minimises scale and stain build-up. The sanitising formulations stop germs breeding and eliminates odours at the source for an odour-free environment.

The unit operates on a 24-hour, 30 day refill cycle and is fully programmable.

## PREMIER SEAT SANITISER

Reduce the cross-infection risk posed by toilet seats and give staff and customers peace of mind with the Premier Seat Sanitiser. The gel dries in seconds to provide an effective pathogenic bacteria barrier.

The unit features one-hand operation and Polygiene® antibacterial technology.

## PREMIER TCell™ FRAGRANCE UNIT

The TCell™ fragrance unit provides a consistent level of pure fragrance and odour neutralisers.

Completely environmentally friendly, the unit does not require a battery and contains no Volatile Organic Compounds (VOCs) or ozone-depleting compounds. The refill is completely recyclable.

## PREMIER FOAM SOAP DISPENSER

Easy to use and hygienic, this unit dispenses a moisturising foam soap which has a skin-neutral PH and is Green Seal certified.

The unit features a one-way valve to prevent clogs and drips, one-hand operation and Polygiene® antibacterial technology.

## PREMIER FRAGRANCE UNIT

Eliminate unpleasant and unavoidable odours with this automatic, touch free, technologically advanced aerosol unit. It operates on a 24-hour, 30 day refill cycle and is fully programmable.

## PREMIER HAND SANITISER

Ideal for cleaning hands when no water is available. The gel eliminates the risk of cross-contamination, kills 99% of common germs and bacteria, dries quickly and freshens hands. The gel is kept safe inside a hermetic (sealed) pouch.

The unit features one-hand operation and Polygiene® antibacterial technology.
