hygiene

hygiene solutions for washroom - technology - linen

We all have xtremely high expectations of the modern day washroom when it comes to safety, cleanliness and sanitation.

Items flushed down the toilet can cause blockages, pollute streams and rivers and can cause hormonal changes in wildlife.

## Xtreme sanitary products

The Concept and Classic sanitary units and nappy disposal units show just how far washroom technology has come. Safe, clean, easy to use and discreet, the Concept disposal units have some unique features. The Concept foot pedal has been cleverly designed so that hand contact is avoided and the risk of cross infection is virtually eliminated. The Concept Auto Lid takes this to a new level, powered by an infra-red sensor, allowing for no contact with the unit whatsoever!

Both the sanitary and nappy disposal units contain Activap, an exclusive sanitiser composed entirely of natural substances. It ensures every towel, tampon or nappy deposited in the unit will be rendered harmless and is effective against bacteria, moulds and viruses including HIV, Hepatitis B and C.

Our Xtreme service ensures that the units are discreetly removed from the premises and all waste is legally disposed of. All the components are subject to the most stringent of inspection and cleaning.

cts and services for Xtreme modern day demands.
